Answer:-

Drupal

Joomla

Wordpress

Majento

Q11)List few commonly used SEO modules.

Answer:-

a)Path auto

b)Service links

c)Site map

d)Google Analytics.

Q12) What are hooks in Drupal?

Answer:- Module are dependent on hooks . Hooks are used by modules to interact with the drupal core.For example we have mymodule.module file in this file we will have mymodule_menu function so here mymodule is module name and menu is hook which will be used for defining menu links.

Q13)What is use of rules module in drupal?

Answer:- Rules modules is for admin to define action for different conditions like you need to do something on the content has been saved event you can do this by using Rules module and define some action that will be executed on the event of saving of content .

Q14) How to define regions in drupal ?

Answer:- To define new regions in drupal you have to go to your current activated theme directory's .info file and write these lines

regions[content] = Content

regions[help] = Help

this will create two regions Content and Help .You can use assign blocks to these regions.

Q15)What is use of Drush module?

Answer:- By using Drush module you can run drupal command line it is command line shell and unix based interface for drupal.

Q16)How to make a module ? What are the main files required to make a module in Drupal.

Answer:- Module is used to extend the core functionality of drupal .you can make it easily for basic purpose and expand its functionality when you more familiar with this these are the main files required for making a drupal module:

a) make a direcotry of module name according to the name of your module and place it in sites/all/modules .

b) mymidule.info — this file defines name and package where the module to be list in drupal

c) mymodule.module — main file for module where all the functions will be define.

these are main files for making modules but you can add css and js files if required here mymodule is the name of module you can change it accordingly.
